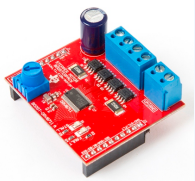
BoosterPack Ecosystem

DRV8301 Motor Driver BoosterPack
- Spin Any Three Phase Motor!
- 6-24V Supply Input
- 10A Continuous/14A Peak

Only $49



DRV8711 Stepper Motor Driver BoosterPack
- Design your own CNC or 3D printer!
- 8-52V Supply input
- 4.5A Continuous/15A Peak

Only $25

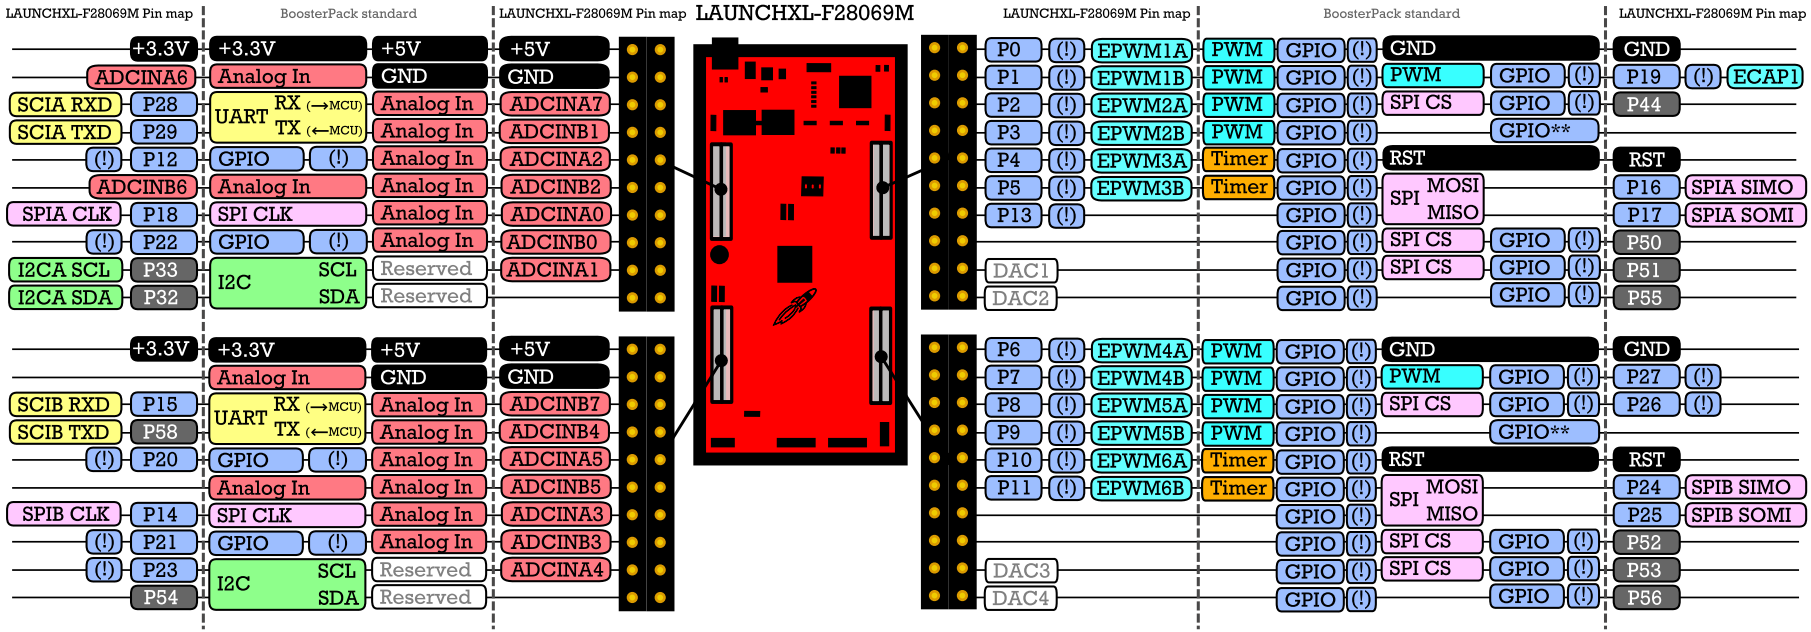
Meet the
TMS320F28069M
LaunchPad
Development Kit

Part Number: LAUNCHXL-F28069M

Below are the pins exposed @ the BoosterPack connector.

Also shown are functions that map with the BoosterPack standard.
* Note that to comply with the I2C channels of the BoosterPack standard, a software-emulated I2C must be used.
** Some LaunchPads do not 100% comply with the standard, please check your LaunchPad to ensure compatability
(!) Denotes I/O pins that are interrupt-capable.



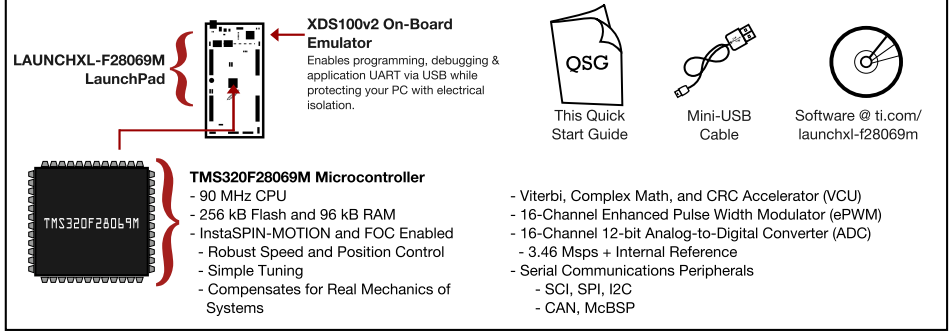
A closer look at your new LaunchPad Development Kit

Featured microcontroller: TMS320F28069M

This LaunchPad is great for...

- Evaluation of InstaSPIN™-FOC and InstaSPIN-MOTION for three phase motor control, including encoder and sensorless based torque, velocity, and servo position control
- Experimentation with power conversion control including DC-AC, AC-DC, DC-DC, and MPPT algorithms
- Power Line Communications and Metering
- Industrial sensing and interface
- DSP, sensing, and capture applications including radar, Doppler, infrared, and time-of-flight

What comes in the box?



TMS320F28069M Microcontroller
- 90 MHz CPU
- 256 kB Flash and 96 kB RAM
- InstaSPIN-MOTION and FOC Enabled
  - Robust Speed and Position Control
  - Simple Tuning
  - Compensates for Real Mechanics of Systems
- Viterbi, Complex Math, and CRC Accelerator (VCU)
- 16-Channel Enhanced Pulse Width Modulator (ePWM)
- 16-Channel 12-bit Analog-to-Digital Converter (ADC)
  - 3.46 Msps + Internal Reference
- Serial Communications Peripherals
  - SCI, SPI, I2C
  - CAN, McBSP

Out-of-box Demo

For more detailed instructions refer to the user's guide @ ti.com/launchxl-f28069m

1. Connecting to the Computer
Connect the LaunchPad using the included mini-USB cable to a computer. Two green power LEDs should illuminate. For proper operation, drivers are needed. It is recommended to get drivers by installing an IDE such as TI's CCS. Drivers are also available at ti.com/xds100drivers.

2. Running the Out-of-box Demo
When connected to your computer, the LaunchPad will power up and flash the red and blue LEDs for approximately 3 seconds. After the LEDs complete flashing the LaunchPad goes into a temperature measurement mode.

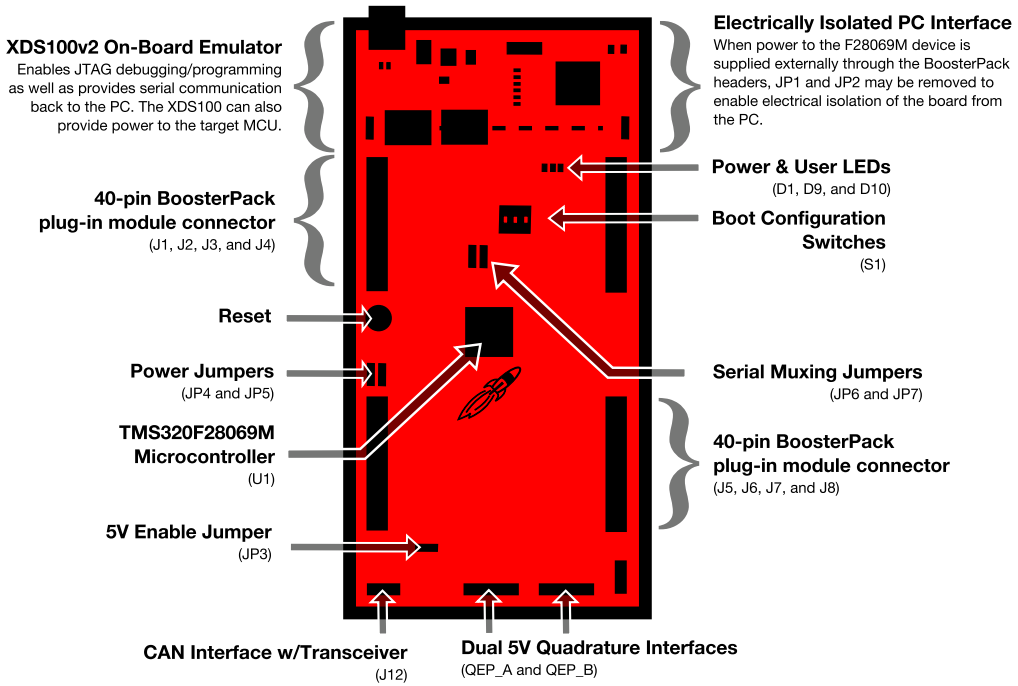
Temperature Mode
This mode provides a simple thermometer application. Using the on-chip temperature sensor, a reference temperature is recorded when this mode is entered. Once a second thereafter, the device's temperature is measured and compared to the reference temperature.

If the temperature has increased the red LED (D9) will light, and will increase in intensity for each degree above the reference the temperature is.

Conversely, if the temperature has decreased the blue LED (D10) will light, and will increase in intensity for each degree below the reference the temperature is.

Temperature data is also sent serially to the PC through the USB cable using a virtual COM port. The data can be viewed in a terminal using these settings: 115200 baud, 8 data, no parity, and 1 stop bit.

LAUNCHXL-F28069M Overview



InstaSPIN™ Technology

Find more information @ ti.com/instaspin

TI's InstaSPIN sensorless, three-phase motor solutions make designing motor control applications easier whether you have a simple application or a complex design.

InstaSPIN™-MOTION
TI's InstaSPIN-MOTION is powered by SpinTAC™ from LineStream Technologies. SpinTAC provides robust control across dynamic speed, position, and load ranges of the system. SpinTAC significantly slashes setup time by replacing hard-to-tune PID controllers with simple, single-parameter tuning. InstaSPIN-MOTION is ideal for applications that require accurate speed and position control, minimal disturbance, and for applications that undergo multiple state transitions or experience dynamic changes.

InstaSPIN™-FOC
TI's InstaSPIN-FOC (field-oriented-control) technology enables designers to identify, tune, and fully control any type of three-phase, variable speed, sensorless, synchronous, or asynchronous motor control system in just minutes

This new technology removes the need for a mechanical motor rotor sensor to reduce system costs and improve operation using TI's new software encoder (sensorless observer) algorithm, FAST™ (Flux, Angle, Speed, and Torque). This enables premium solutions that improve motor efficiency, performance, and reliability in all variable-speed and load motor applications.

Getting Started with InstaSPIN™
To get started download MotorWare from www.ti.com/motorware. After MotorWare is installed, run MotorWare.exe and follow the User's Guide for the F28069M LaunchPad.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
